Tissues that express PPHKP-5 (as a fraction of total CC tissues expressing PPHKP-5) include reproductive (0.288), CC gastrointestinal (0.212) and haematopoietic or immune (0.192). Diseases CC or conditions associated with tissues expressing PPHKP-5 (as a fraction CC of total tissues expressing PPHKP-5) include cancer (0.577), inflammation CC or trauma (0.327) and cell proliferation (0.308). The encoded protein CC shows homology to rat kinase. The invention provides human PPHKP-1 to -11 CC polypeptides (see AAB20322-32) and polymucleotides (see AAB30476-86). It CC antagonists, as well as methods for diagnosing, treating or preventing CC disorders associated with expression of PPHKP, including gastrointestinal CC disorders, immune system disorders, neurological disorders and cell CC disorders, immune system disorders, neurological disorders and cell

                                                                                                                                                                                                                                                                                                                                 CC AAU03501-AAU03557 represent novel human protein kinases #1-57. The novel CC protein kinases have been identified as members of the tyrogine or CC serine/threonine kinase (PTK and STK) families. The polynucleotides encoding protein kinases (PTK and STK) families. The polynucleotides CC encoding protein kinases and the polypeptides may be used in the CC inappropriate kinase expression. For example, they may be used to treat CC cancers (especially cancers of haematopoietic origin), cardiovascular CC disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), CC immune related diseases (e.g. rheumatorid arthritis), neurological CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. CC Parkinson's disease), inflammatory disorders (e.g. asthma), infectious CC disease (e.g. HIV) and reproductive disorders (e.g. infertility). CC Additionally, polynucleotides encoding protein kinases may be used for gene therapy and as DNA probes in diagnostic assays. The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   뮍
                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the cencoded polypeptides (AAM38642-AAM42213) with nootropic, containing a polypeptide are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and coloralised neuropathies and central nervous system diseases, such as containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system diseases, such as contained neuropathy and contained nervous system diseases, such as contained in the contained the such as contained the cutilised neuropathy and shy-prager Syndrome. Other uses include the cutilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, cassays for receptor activity, arthritis and inflammation, leukaemias and cc. N.S. disorders. Note: The sequence data for this patent did not form cc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-DEC-1999; 99US-00471275.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM8642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and cannot activity. The sequence data for this patent did not form

Controlling cell-death by administering positive or negative regulator of cell-death inhibitory-factor, for treating cancer, AIDS, autoimmune diseases, Crohn's diseases, glaucoma, Alzheimer disease.

Claim 1; SEQ ID NO 3; 35pp; Japanese.

CC comprising administering a positive or negative regulator of cell-death combitory-factor. The invention also comprises a method for screening combilators of cell-death, by contracting cells expressing cell-death combitory factor with a candidate compound, monitoring level of capression of cell-death inhibitory factor, evaluating cell-death combitory factor ability of the compound based on charge in the level of capression of the factor and selecting compounds having cell-death combitory factor, invention may have cardiant, neuroprotective, anti-HIV, anti-Inflammatory, cerebroprotective, cardiant, neuroprotective, anti-HIV, anti-Inflammatory, cerebroprotective, cophthalmological, noctropic, anti-parkinsonia, anti-convulsant, of the method of the invention is useful for treating cophensive, anti-arteriosclerotic, haemostatic, anti-alcoholic and cardiac diseases, immunological diseases, neurodegenerative disease, ischaemic damage and congestion, disorder of central nervous system, cardiac diseases, acute pancreatic inflammation, and cancer, AIDS, auto-immune diseases, reperfusion damage, myocardial infarction, cerebral trauma, cerebral infarction, cerebral infarction, cerebral infarction, cerebral trauma, cerebral trauma, cerebral infarction, cerebral trauma, cerebral trauma, cerebral infarction, cerebral trauma, cerebral infarction, cerebral trauma, c hepatitis, and co human cell death invention relates to a novel method for controlling cell-death and cerebral ischemia. inhibitory protein The present sequence represents the оf the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 닭
                                                                                                                                                                          also known as stress kinase inhibitor protein (SKIP-1) polypeptide. The calls kinase inhibitor protein (SKIP-1) polypeptide. The calls kinase inhibitor protein (SKIP-1) polypeptide. The calls we signal in a cell. The polypeptide employed in the method is preferably thrb-1 N htrb-1 N htrb-1 N c, htrb-3 N htrb-3 C, or htrb chronic protein for providing htrb agonist activity for CC activating an ERK-mediated signal e.g. AP-1-mediated gene activation (Signal), an estrogen receptor-mediated gene activation signal, an coll such factor (FGF) induced signal, or a PMA induced signal, or a cell. Htrb modulators are useful for modulating AP-1 mediated inflammatory signal, or an interleukin induced inflammatory signal, or an interleukin induced inflammatory signal in a cell such as tumor necrosis factor (TMF) induced inflammatory signal, or an interleukin induced inflammatory signal htrb proteins are useful in screening assays, predictive medicine and in therapeutics or prophylactics. The htrb proteins are useful for screening compounds e.g. for treating and/or preventing diseases caused by abnormal thrb activity, such as rheumatoid arthritis, diabetes, psoniasis, constant white chiscofers of human nicental intraventicular hemorrhage, neonatal white
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel

The present sequence represents a partial polypeptide which has kinase activity. The kinase polynucleotides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and proteins

                                                                                                  treatment
```

The invention provides human kinases (PKIN) and polynucleotides encoding PKIN. The PKIN polypeptides can be expressed using standard recombinant methodology. The PKIN polypeptides, polynucleotides, modulators and specific antibodies are useful in the diagnosis, treatment and prevention of cancer, immune disorders, disorders affecting growth and development, atherosclerosis, and other cardiovascular diseases, and lipid disorders and in the assessment of the effects of exogenous compounds on the expression of nucleic acid sequences of human kinases. The present sequence represents a human PKIN-10 polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          comprising administering a positive or negative regulator of cell-death inhibitory-factor. The invention also comprises a method for screening modulators of cell-death, by contacting cells expressing cell-death inhibitory factor with a candidate compound, monitoring level of expression of cell-death inhibitory factor, evaluating cell-death modulation ability of the compound based on change in the level of expression of the factor and selecting compounds having cell-death modulation ability. The cell death regulator of the invention may have cardiant, neuroprotective, anti-HIV, anti-inflammatory, cerebroprotective, hepatotropic, cytostatic, immunosuppressive, anti-hematic, ophthalmological, nootropic, anti-parkinsonia, anti-convulsant, hypotensive, anti-resurred activities. The method of the invention is useful for treating virucide activities. The method of the invention is useful for treating the parking of the invention is useful for treating the method of the invention is useful for treating the method of the invention is useful for treating the method of the invention is useful for treating the method of the invention is useful for treating the method of the invention is useful for treating the method of the invention is useful for treating the method of the invention is useful for treating the method in the invention is useful for treating the method in the invention is useful for the invention is usef

                                                  cc antinflammatory; antithyroid; antiallergic; antibacterial; antiviral; cc dermatological; neuroprotective; cardiant; thrombolytic; coagulant; cc dermatological; neuroprotective; cardiant; thrombolytic; coagulant; cc mootropic; vasotropic; antipsoriatic and antiangiogenic. The mootropic; vasotropic; antipsoriatic and antiangiogenic. The conditions of cc polymoclectides and polypeptides can be used for preventing, treating or polymoclectides, polypeptides, antibodies, agonists and antagonists from cc present invention may be used to treat immune disorders by activating cc immune cells, to treat disorders of haematopoietic cells, autoimmune cc disorders, allergic reactions, graft versus host disease and organ crejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and companies and antagonists may be also be used in drug screens, AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of the more and AAB44240 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antiinflammatory; antithyroid; antiallergic; antibacterial; cardiant; dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoietic cell disorder; autoimmune disorder; allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB43657 standard; protein; 233 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnosis; cytostatic; proliferative; vulnerary; immunomodulator;
antidiabetic; antiasthmatic; antirheumatic; antiarthritic; antiviral;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human cancer associated protein sequence SEQ ID NO:1102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 08-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB43657;

                                                                                                                                                                                                                                                                                                                                                                                               AAC77607 to AAC78448 encode the human cancer associated proteins given AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acids comprising sequences useful for treating or diagnosing e.g. cancer.

The NS can be used in vaccines, gene therapy and antisense therapy. Nucleic acids, expression vectors and antibodies from the present invention can be used for treating and diagnosing e.g. cancer, osteoporosis, endometriosis, degenerative diseases, dystonia, multiple sclerosis, rheumatoid arthritis, psoriasis, cataracts, restenosis, atherosclerosis, inflammation, skin disorders, glaucoma, obesity, muscular dystrophy, AIDS, infertility, cardiovascular disease, coagulation disease, ischaemia, hypertension, asthma, immune disease, coagulation disease, ischaemia, hypertension, asthma, immune disease, epilepsy, angina, neurodegeneration, diabetes, anxiety, depression, schizophrenia, viral disease, gastric ulcers, stroke, Alzheimer's disease and as a contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                  rheumatoid arthritis; cataract; restenosis; atherosclerosis; glaucoma; inflammation; skin disorder; obesity; muscular dystrophy; AIDS; infertility; cardiovascular disease; coagulation disease; hypertension; ischaemia; asthma; immune disease; epilepsy; angina; neurodegeneration; diabetes; anxiety; depression; schizophrenia; viral disease; stroke;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human NS protein sequence SEQ ID NO:200.

CC tyrosine kinase activity or members of the protein tyrosine kinase for tyrosine kinase activity or members of the protein tyrosine kinase for gathway. Also described: (1) predicting whether a compound is capable of cells, comprising obtaining a sample of cells, comprising obtaining a sample of cells, correlating the expression of the markers to the compound's ability to correlate the activity of the cells; (2) a plurality of cell lines for consolidate the activity of the cells; (2) a plurality of cell lines for correlate with compound sensitivity or resistance of cells associated with a disease state; and (3) identifying polymucleotides and compound sensitivity or resistance of cells associated with a disease state, comprising subjecting the plurality of cell lines to one or more compounds, analysing the expression pattern of cells associated with a disease state, comprising the expression pattern of cells associated with a disease state by using the expression pattern of cells associated with a disease state by using the compounds of cells associated with a disease state by using the compounds and compounds, and selecting the compounds and polypeptides, and selecting cells associated with a disease state by using the compounds and polypeptides are useful in predicting the compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways. These may be used in determining drug centerior profession and increars (e.g., constitution and increars (e.g., constitution and increases and disorders (e.g., constitution a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-JAN-2002; 2002US-0350061P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             17-JAN-2003; 2003WO-US001981
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        31-JUL-2003
                                                 genetic profiles which aid in treating diseases and disorders (e.g. cancer) based on patient response at a molecular level. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a predictor set comprising a plurality of polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     tyrosine kinase pathways.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotides and polypeptides for predicting the activity of compounds that interact with protein tyrosine kinases and/or protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 10;

                                                                                                                                                                                                               CC The invention provides an isolated human tribbles homologue-1 (htrb-1, CC also known as stress kinase inhibitory protein (SKIP-1)) polypeptide. The Also known as stress kinase inhibiting an AP-1 mediated inflammatory signal in a cell. The polypeptide employed in the method is preferably thrb-1, htrb-1 N htrb-1 C, htrb-1 N C, htrb-3 N htrb-3 C, or htrb C-3 N C. It is also useful for providing htrb agonist activity for activating an ERK-mediated signal e.g. AP-1-mediated gene activation CC signal, an estrogen receptor-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an ell. Htrb modulators are useful for modulating AP-1 mediated coin a cell. Htrb modulators are useful for modulating AP-1 mediated coin a cell. Htrb modulators are useful for modulating AP-1 mediated coinflammatory signal, or an interleukin induced inflammatory signal, htrb creating and/or preventing diseases caused by abnormal contents are useful in screening assays, predictive medicine and in the proteins are useful for treating and/or preventing diseases caused by abnormal contents as the htrb therapeutics are useful for anthritis, diabbetes, psoriasis, osteoporosis, diabetic retinopathy, myocardial infarction and cancers. The htrb therapeutics are useful for antagonizing interleukin-1 dependent matter damage and subsequent cerebral palsy; and inflammation or cultoImmune disorders. The present sequence represents the htrb-1 contoling autoLimmune disorders. The present sequence represents the htrb-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś

Example 4; SEQ ID NO 304; 107pp; English.

CC and brain tissue and is useful for the treatment of central and control of such cases and neuropathies, such as Alzheimer's, CC parkinson's disease, Huntington's disease, and amyotrophic lateral CC sclerosis. In addition, (I) is involved in chemotactic or chemokinetic CC activity, regulation of haematopoiesis and is useful for treating myeloid CC or lymphoid cell disorders, platelet disorders such as thrombocytopenia CC and for regeneration of bone, cartilage, tendon, ligament and/or nerve cc tissue growth, and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders, cor periodontal disease. Furthermore, (I) is also useful for gut CC protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and CC disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, CC reactions and conditions, such as asthma or other respiratory problems. CC fertility, metabolism, catabolism, anabolism, storage or elimination of disorders in the protein carbohydrare witemine minerals. provides The invention relates to novel isolated human secreted polypeptides (I) and polynucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth and remodeling. (I), (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve analgesic effects or other pain reducing effects, immunoglobulin like activity and can act as an antigen in a vaccine composition to raise an immune response. AAU28020-AAU28395 represent novel human secreted protein dietary fat, lipid, protein, carbohydrate, vitamins, minerals, invention relates to novel isolated human secreted polypeptides (I) polynucleotides (II). (I) and (II) are useful for treating acid sequences of the invention provides
